Int 21H, AH=43H, AL=01H

Version

2 and higher

Brief

“CHMOD” - SET FILE ATTRIBUTES

Family API

Input

```
AX = 4301h
CX = new file attributes (see #01420)
DS:DX -> ASCIZ filename
```

Return

CF clear if successful

```
    AX destroyed
CF set on error
    AX = error code (01h,02h,03h,05h) (see #01680 at AH=59h)
```

Macro

Notes

will not change volume label or directory attribute bits, but will change the other attribute bits of a

directory (the directory bit must be cleared to successfully change the other attributes of a directory, but the directory will not be changed to a normal file as a result)

MS-DOS 4.01 reportedly closes the file if it is currently open

for security reasons, the Novell NetWare execute-only bit can never be cleared; the file must be deleted and recreated

under the FlashTek X-32 DOS extender, the filename pointer is in DS:EDX

DOS 5.0 SHARE will close the file if it is currently open in sharing-compatibility mode, otherwise a sharing violation critical error is generated if the file is currently open

DR DOS 3.41/5.0 will silently ignore attempts to change the 'directory' attribute bit

Bitfields for file attributes:

Bit(s)	Description
7	shareable (Novell NetWare)
7	pending deleted files (Novell DOS, OpenDOS)
6	unused
5	archive
4	directory
3	volume label
3	execute-only (Novell NetWare)
2	system
1	hidden
0	read-only
