# Int 21H, AH=0AH

## Version

1 and higher

## Brief

BUFFERED INPUT

## Family API

[DosRead](#)

## Input

```
AH = 0Ah
DS:DX -> buffer (see #01344)
```

## Return

```
buffer filled with user input
```

## Notes

^C/^Break are checked, and INT 23 is called if either detected reads from standard input, which may be redirected under DOS 2+

if the maximum buffer size is set to 00h, this call returns immediately without reading any input

Format of DOS input buffer:

Offset	Size	Description			
00h	BYTE	maximum characters buffer can hold			
01h	BYTE	(call) number of chars from last input which may be recalled (ret) number of characters actually read, excluding CR	02h	N BYTES	actual characters read, including the final carriage return

## See also

AH=0Ch,INT 2F/AX=4810h

## Note

Text based on [Ralf Brown Interrupt List Release 61](#)
