# Int 21H, AH=1CH

## Version

1 and higher

## Brief

GET ALLOCATION INFORMATION FOR SPECIFIC DRIVE

## Family API

none

## Input

```
AH = 1Ch  
DL = drive (00h = default, 01h = A:, etc)
```

## Return

AL = sectors per cluster (allocation unit), or FFh if invalid drive

```
CX = bytes per sector  
DX = total number of clusters  
DS:BX -> media ID byte (see #01356)
```

## Notes

under DOS 1.x, DS:BX points at an actual copy of the FAT; later versions return a pointer to a copy of the FAT's ID byte

on a DBLSPACE drive, the total number of clusters is based on the estimated compression ratio

this function may not be properly supported on CD-ROMs and other installable file systems (use AX=4402h“CD-ROM” for CD-ROMs instead)

BUG: DOS 7.10 (Win95B/Win98) reportedly returns incorrect values in AL and DX for FAT12/FAT16 drives, even though it manages correct results for FAT32 drives (DOS windows are not affected, only real-mode DOS)
