## DosNewSize

This call changes the size of a file.

### Syntax

DosNewSize (FileHandle, FileSize)

### Parameters

;FileHandle (HFILE) - input : Handle of the file whose size is being changed. ;FileSize (ULONG) - input : File's new size in bytes.

### Return Code

rc (USHORT) - return Return code descriptions are: \* 0 NO\_ERROR \* 5 ERROR\_ACCESS\_DENIED \* 6 ERROR\_INVALID\_HANDLE \* 26 ERROR\_NOT\_DOS\_DISK \* 33 ERROR\_LOCK\_VIOLATION \* 87 ERROR\_INVALID\_PARAMETER \* 112 ERROR\_DISK\_FULL

### Remarks

When DosNewSize is called, the file must be open in a mode that allows write access. If the file is a read-only file, its read-only status must be changed with DosSetFileMode before you can open the file for write access.

The open file can be truncated or extended in size. If the file is being extended, the file system makes a reasonable attempt to allocate the additional bytes for the file in a contiguous (or nearly contiguous) space on the medium. The value of the new bytes is undefined.

### Example Code

## C Binding

```
<PRE> #define INCL_DOSFILEMGR

USHORT rc = DosNewSize(FileHandle, FileSize);

HFILE FileHandle; /* File handle */ ULONG FileSize; /* File's new size */

USHORT rc; /* return code */ </PRE>
```

## MASM Binding

```
<PRE> EXTRN DosNewSize:FAR INCL_DOSFILEMGR EQU 1

PUSH WORD FileHandle ;File handle PUSH DWORD FileSize ;File's new size CALL DosNewSize

Returns WORD </PRE>
```
