DosPortAccess

This call requests or releases access to ports for I/O privilege.

Syntax

```
DosPortAccess (Reserved, TypeOfAccess, FirstPort, LastPort)
```

Parameters

- Reserved (USHORT) - input : Must be set to zero.
- TypeOfAccess (USHORT) - input : A request for or release of access to a port.
  - 0 - Request access
  - 1 - Release access.
- FirstPort (USHORT) - input : Starting (low) number in a contiguous range or a single port.
- LastPort (USHORT) - input : Ending (high) number in a contiguous range or a single port. If only one port is being used, FirstPort and LastPort should both be set to this port.

Return Code

rc (USHORT) - return:Return code descriptions are:

- 0 NO_ERROR
- 5 ERROR_ACCESS_DENIED

Remarks

Note that CLI/STI privilege is also granted automatically. There is no need to make an additional call to DosCLIAccess.

Applications that perform I/O to port(s) in IOPL segments must request port access from the operating system.

An application with no IOPL segments that accesses a device through a device driver or by an interface package such as VIO, does not need to issue this call. The device driver or interface package is responsible for obtaining the necessary I/O access.
