

# Video Functions

This section reflects the Video API interface of OS/2 only.

If `ERROR_VIO_SEE_ERROR_LOG` is returned, further information about the error that occurred can be obtained by calling `WinGetLast Error`.

## Notes:

- Calls marked xPM are not supported by Presentation Manager, and must not be used by Presentation Manager applications. An error code is returned if any of these calls are issued.
- Calls marked xWPM are not windowable and are not supported by Presentation Manager. They can be used in OS/2 mode.
- Calls marked FAPI are present in the Family API.
