DosNewSize

This call changes the size of a file.

Syntax

```
DosNewSize (FileHandle, FileSize)
```

Parameters

- FileHandle ([HFILE](#)) - input : Handle of the file whose size is being changed.
- FileSize ([ULONG](#)) - input : File's new size in bytes.

Return Code

rc ([USHORT](#)) - return

Return code descriptions are:

- 0 NO_ERROR
- 5 ERROR_ACCESS_DENIED
- 6 ERROR_INVALID_HANDLE
- 26 ERROR_NOT_DOS_DISK
- 33 ERROR_LOCK_VIOLATION
- 87 ERROR_INVALID_PARAMETER
- 112 ERROR_DISK_FULL

Remarks

When DosNewSize is called, the file must be open in a mode that allows write access. If the file is a read-only file, its read-only status must be changed with [DosSetFileMode](#) before you can open the file for write access.

The open file can be truncated or extended in size. If the file is being extended, the file system makes a reasonable attempt to allocate the additional bytes for the file in a contiguous (or nearly contiguous) space on the medium. The value of the new bytes is undefined.

Example Code

C Binding

```
#define INCL_DOSFILEMGR

USHORT rc = DosNewSize(FileHandle, FileSize);

HFILE      FileHandle;    /* File handle */
ULONG      FileSize;      /* File's new size */

USHORT      rc;           /* return code */
```

MASM Binding

```
EXTRN DosNewSize:FAR
INCL_DOSFILEMGR EQU 1

PUSH WORD FileHandle ;File handle
PUSH DWORD FileSize ;File's new size
CALL DosNewSize
```

Returns WORD
